Data Science Career Track
Capstone: Pre-processing and Training Data Development Rubric

Learning Objectives
- Understand the importance of creating a model training development data set.
- Correctly identify when to create dummy features or one-hot encoded features.
- Understand the importance of magnitude standardization.
- Apply the train and test split to the development dataset effectively.

Criteria	Meets Expectations

Completion	❏ Every step identified in the DSM has been addressed or completed, including:
	  ❏ Creating dummy features
	  ❏ Scale standardization
	  ❏ Split data into training and testing subsets

Process and understanding	❏ The submission shows that the student understands when to apply the steps identified in the completion block.
Presentation	❏ Jupyter Notebook with all the applied code steps in working order and with notation or comments as needed. ❏ The submission is complete and uploaded in full to the Github repo.
